

Dear Land Owner,

Thank you for your interest in our MicroFIT Solar Program. My name is Kelly Rumble and I am sincerely happy you are taking the time to learn about the great potential we have for solar energy in Ontario. It may not be for you, but that's OK, maybe someone you know or meet may be interested in our program.

A recently released program by the Ontario government, called the MicroFIT program, has made Solar Energy a exciting new opportunity in our province. At Rumble Energy, we are looking to work with you to harness this green energy potential and create a cleaner, brighter future for all of us.

There is no doubt, energy from solar panels is great. It's silent. It's totally clean, emitting no gas or chemicals. It reduces our dependance on foreign oil and power companies, making Canadians more independent. It decentralizes our power grid, so we waist less money sending power over lines that are inefficient. Finally, its helps fight global warming.

However solar energy and the installation and maintenance of solar generation systems are a complicated and involved task. The upfront costs of such systems are very high, ranging from \$85,000 to \$100,000. Finally, they require extensive remote monitoring and tracking to ensure effective productivity.

This is why many people with the land needed to install such a system, have not. They do not want to invest \$100,000 on a system that can make them a few thousand dollars per year running perfectly. A high voltage system they do not understand or have experience working with.

This is where we hope to help. We will lease a tiny portion of your land to install a MicroFIT solar system that we pay for and we maintain. In return, we GUARANTEE you an income of \$1,500 per year for the next 20 years though a simple lease. It's that easy.

Sincerely,
